EDUCATION

Malaviya National Institute of Technology (MNIT), Jaipur
Bachelor of Technology (B.Tech) – Electrical Engineering

2024 – Present
CGPA: 8.3

PROJECTS

AI-Based Internship Recommendation Platform

Python, FastAPI, MySQL, NLP

- Designed and developed a full-stack internship recommendation platform with a FastAPI backend, RESTful APIs, and MySQL-based persistence for resumes and job listings.
- Implemented resume ingestion pipeline (PDF parsing + preprocessing) and TF-IDF based semantic matching engine for automated resume-to-job scoring.
- Built responsive frontend interface for resume upload, job browsing, and top-K recommendation display with real-time similarity scoring.
- Containerized and tested backend services with version-controlled deployment workflows using Git and modular project structure.

Autonomous Agent Marketplace (x402 Protocol)

Python, Solidity, Web3, Monad

- Architected CLI-first decentralized multi-agent marketplace with on-chain smart-contract provider indexing and x402 (HTTP 402) machine-payment protocol for cryptographically-attested agent-to-agent micropayment settlement.
- Deployed Solidity contracts on Monad testnet implementing SLA-enforced escrow, trust-minimized atomic settlement, and automatic on-chain refund arbitration for SLA violation slashing conditions.
- Engineered fully autonomous execution pipeline: HTTP 402 challenge → EVM transaction signing → on-chain crypto transfer → cryptographic proof replay with Web3 async agent orchestration.

DiaIntel Crowdsourced Treatment Intelligence Platform

Python, NLP, FastAPI, React, Docker

- Engineered an end-to-end pharmacovigilance pipeline ingesting real Reddit Pushshift dumps via zstandard decompression, extracting adverse events with BioBERT, scoring per-drug sentiment with RoBERTa, and flagging medical misinformation via BART-MNLI zero-shot classification across 8 Type 2 Diabetes therapeutics.
- Implemented 3-layer NLP extraction spaCy rule-based outcome classification, temporal expression mining for recovery timelines, and drug co-occurrence detection for combination therapy identification surfaced through a FastAPI backend with Redis caching and a D3.js force-directed Drug-AE knowledge graph.

Social Media Application Backend

FastAPI, PostgreSQL

- Developed backend services using FastAPI with secure JWT-based authentication and authorization.
- Designed relational schemas using PostgreSQL and tested APIs using Postman.

TECHNICAL SKILLS

Languages & Tools: C, C++, Python, JavaScript, Git, GitHub, FastAPI, Postman

Databases & Backend: MySQL, PostgreSQL, SQL Queries, REST API Development

CS Fundamentals: Object-Oriented Programming, Data Structures & Algorithms

AI / ML: Machine Learning Pipelines, Deep Learning, Natural Language Processing

Frameworks & Other: PyTorch, Solidity, Web3, Docker, Redis, React, spaCy, BioBERT, RoBERTa

CODING PROFILES & ACHIEVEMENTS

- Solved 200+ Data Structures & Algorithms problems across various platforms (**bhuwangupta2511**) LeetCode Profile
- Finalist at LNMHacks 8.0 (LNMIIT Jaipur)
- Qualified Internal Campus Round of Smart India Hackathon (SIH ID: 53678)
- Maintain versioned project repositories and collaborative workflows via GitHub
